

DE4008615

Two component container for fluid or paste like substances - has elastic inner container with high resetting force to force contents into outer container

Patentanmelder:

WELLA AG (DE)

Erfinder:

HILDEBRANDT BODO (DE)

Publ. Datum:

19.09.1991

Priorität:

DE19904008615

ältestes Prioritätsdatum:

17.03.1990

Derwent Patentfamilie:

DE4008615 A

Patentklasse (IPC):

A45D19/00

A45D34/04

B65D25/38

B65D47/36

B65D81/32

B65D83/00

Europ. Patentklasse:

B65D81/32D1

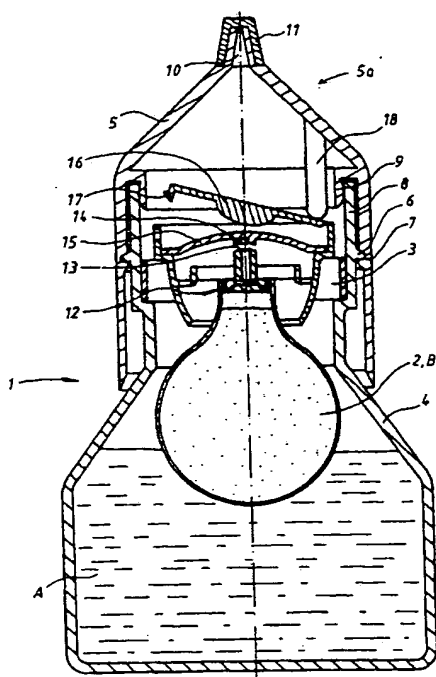

Zusammenfassung:

The two-component container for fluid or paste-like substances has an inner container completely enclosed by an outer container. The inner container is stretchable with great elasticity and has a high resetting force. It is provided with a product dispenser valve (12) which is connected in force locking manner to a projection (18) of an attachment (5) which is fixed for displacement, rotation or screw-action on the outer container (4).

Between the projection and the product dispenser valve there is an articulated plate (16) which rests on the valve. The plate can lock into a recess (19) in a position biasing the valve.

USE - Especially for hair colouring substances to ensure thorough mixing of the contents.
